## Main findings for Amundi :

- An aggregate remuneration among the lowest of the listed asset managers (8 out of 8 in 2017 and 6 out of 7 in 2016) despite a greater size and better progression 2016-2017 observed on the panel in terms of economic and stock performances.
- An evolution of the variable remuneration for 2017 lower than Amundi's financial performances for the period, while staying one of the lowest of the panel (7 out of 8)
- A compensation structure made of a fixed and variable remuneration, with no LTI, unlike the common practice observed on the market
