Where will the Securities be traded?

Admission to trading

The Securities are not admitted to trading.

What are the key risks that are specific to the Securities?

Most material risk factors specific to the Securities

There are risk factors which are material for the purpose of assessing the risks related to the Securities, including the following:

Risks relating to the market of the Securities

- The market value of the Securities may be adversely impacted by many events which could result in a loss of investment for the Holders.
- Trading of Securities in any secondary market may be limited and Holders may not be able to easily dispose of their Securities or to dispose of them at a price that provides a return comparable to similar products for which an active market would have developed.

Risks as the creditor of the Issuer

- A resolution procedure initiated at the level of the Crédit Agricole Group or any entity of the Crédit Agricole Group, or Amundi could result in a more rapid decline in the market value of the Securities.
- The exercise of any power under the BRRD or any suggestion of such exercise at the level of the Crédit Agricole Group or any entity of the Crédit Agricole Group could materially adversely affect the rights of the Holders, the price or value of their investment in the Securities and/or the ability of the Issuer, to satisfy its obligations under the Securities. As a result, Holders could lose all or a substantial part of their investment in the Securities and/or not receive the remuneration initially provided for.
- An investment in the Securities exposes the Holders to the credit of the Issuer, the Holders do not benefit from any protection or guarantee of the capital invested in connection with their investment in the Securities.
- Return on the Securities may be limited or delayed by the insolvency of the Issuer. The commencement of insolvency proceedings against the Issuer could have a material adverse effect on the market value of Securities issued. Any decisions taken by a class of affected parties could significantly impact the Holders of Securities and cause them to lose all or part of their investment, should they not be able to recover all or part of the amounts due to them from the Issuer.
- Absence of gross-up provisions under the Securities. The Issuer shall not be obliged to make any increased payment to compensate for any withholding or deduction relating to any Securities. Holders may receive less than the full amount due, and the market value of such Securities will be adversely affected. As a result, Holders could lose part of their investment in the Securities.
- Absence of negative pledge: As a result of the absence of negative pledge, Holders of the Securities will not benefit from protection regarding the status of the Securities or assets to support the Securities, bear more credit risk than secured creditors of the Issuer and may lose all or part of their investment in the Securities.

Risks relating to the structure of a particular issue of Securities

Risks relating to the redemption of the Securities

The Securities may be subject to automatic redemption upon the occurrence of an Automatic Early Redemption Event for their Automatic Early Redemption Amount. Such automatic redemption may have an adverse effect on the value of the Securities and may lead to redemption at an amount or time less favourable for Holders, who may thus not receive the total amount of the capital invested.

Risks relating to Certificates

There are no events of default under the Certificates. Accordingly, if the Issuer fails to meet any obligations under the Securities, including the payment of any interest (or bankruptcy proceedings are instituted), Holders will not be able to accelerate the payment of principal. Upon a payment default, the sole remedy available to Holders of such Securities for recovery of amounts owing in respect of any payment of principal or interest on such Securities will be the institution of proceedings to enforce such payment, which could be time-consuming and costly. This could result in significant delays in the payment of interest or principal and could have a material adverse effect on the Holders seeking repayment. As a result, Holders could lose all or part of their investment in the Certificates.

No collective organisation of Holders, as each Certificate constitutes a separate claim and not form a Series. Holders of Certificates are not grouped into a masse or collective body with a view to protecting their interests. As a consequence, their interests may not be well represented and protected, which could have an adverse effect on the market value of the Certificates and could result in the Holders of Certificates losing part of their investment in the Certificates.

Risks relating to the relevant underlying of the Securities

Certain Factors may affect the value and the trading price of the Securities: price or value of the Underlying Reference, volatility of the Underlying Reference, dividends and other distributions, rate of interest, remaining time. As a result of all of these factors, any Holder who sells the Securities prior to the stated Maturity Date may receive an amount in the secondary market which may therefore be significantly less than the intrinsic market value of the Securities and which may also be less than the amount that the Holder would have received if the Holder had retained the Securities until the Maturity Date.

Risk of capital loss for Securities for which the indexation of the payment and/or redemption amount is determined based on a calculation formula and/or indexed to one or more underlying assets. In the event of an unfavourable change in the price, value or level of the Underlying Reference, or in the event of the occurrence of an unfavourable change in the price, value or level of the Underlying Reference or in the occurrence of or the absence of occurrence of an event affecting the Underlying Reference, the Holders may suffer a significantly decreased rate of return on the Securities or even no return whatsoever, could see the amounts of interest and repayment significantly negatively impacted and lose all or part of the capital initially invested.

Investment in Share Linked Securities may bear similar market risks to a direct equity investment. The market price of Share Linked Securities may be volatile and may be affected by the time remaining to the redemption date, the volatility of the share or shares, the dividend rate (if any) and the financial results and prospects of the issuer or issuers of the relevant share or shares as well as economic, financial and political events in one or more jurisdictions, including factors affecting the stock exchange(s) or quotation system(s) on which any such shares may be traded. As a result, Holders are exposed to the risk that changes in the relevant price of the share(s) may have an adverse effect on the amounts of interest, early redemption or final redemption, if any, as well as on the value of Share Linked Securities.

The Holders of Physical Settlement Share Linked Securities will receive share(s) rather than a monetary amount upon delivery. Holders will, therefore, be exposed to the issuer of such share(s) and the risks associated with such share(s). Under certain circumstances the share(s) may only have a very low value or may, in fact, be worthless, and as a consequence the Holders may lose the original invested amount. The value of Physical Settlement Share Linked Securities may be affected and/or their settlement may be delayed if in the opinion of the Calculation Agent, delivery of the share amount is impracticable because a special event has occurred and is continuing on the Delivery Date. This may have a negative adverse effect on the value of the Securities and, in the case of payment of a cash amount, will affect the timing of the valuation of such Securities and as a result, the amount of nominal principal payable on redemption. As a result, Holders may lose all or part of their investment due to the occurrence of a special event.

Risk factors relating to specific features

Multiple features i.e. different combinations of payout features: A Series of Securities may contain one or more of the specific features described above in different combinations. Accordingly, the risks outlined in respect of each such feature above may be compounded where a number of features apply to a single Series of Securities. These features may also impact the value of the Securities and as a result, Holders may lose all or part of their investment.

Barrier: The payment of interest/redemption amount will be conditional on the value or performance of the Underlying Reference as determined in accordance with the Conditions applicable to the relevant Determination Date, being greater than or equal to a specified barrier value and if such condition is not satisfied then the amount of interest due will be zero and the redemption amount may be less than par. As a result, Holders may lose all or part of their investment.
